The scatterplot shows that most apps have a `reviews_count` under 10,000, with an average rating between 4 and 5. Apps with fewer reviews generally have higher average ratings. However, as the review count increases, the average rating hovers around a high value (~4). An outlier with around 20k reviews shows a drop in average rating but still remains considerably high. This suggests that increasing reviews tend to stabilize or slightly reduce the average rating but does not drop significantly.
